

MT Product Series

Our portable devices are designed especially for testing of meter installations on-site. Its functionality meets all requirements for comprehensive meter testing. We distinguish between reference meters, sources and test systems.

We offer a series of reference meters which meet a variety of requirements with accuracy classes from 0.2 up to 0.02. While testing meter installations on-site often a sufficient load is missing to achieve reliable results. You can generate currents up to 120 A and voltages up to 500 V with our sources. Our definition of test systems is a reference meter with an integrated source. Test systems are particularly usable for testing meter installations with defined current and voltage and only one single device will be used.

Product Lines

MT310s2

Reference Meters

We offer a series of reference meters which meet a variety of requirements. Primarily they are used for testing of meter installations on-site with accuracy classes from 0.2 up to 0.02.

MT551

Sources

While testing of meter installations on-site often a sufficient load is missing to achieve reliable results. You can generate currents up to 120 A and voltages up to 500 V with our sources.

MT78x

Test Systems

Our definition of test systems is a reference meter with integrated source. Test systems are particularly usable for testing meter installations with defined current and voltage and only one single device should be used.

Summary of functionality

Type	Reference Meter					Source			Test System		
Function \ Device	MT10/30	MT3x0	MT310s2	MT36x	MT3000	MT400	MT500	MT551	MT68xs	MT68x	MT78x
Actual values	X	X	X	X	X	X	X	X	X	X	X
4 th channel/effective values	-	-	X	-	-	-	-	-	-	-	-
Curve	X	X	X	X	X	0	0	X	X	X	X
Vector	X	X	X	X	X	X	X	X	X	X	X
Error	X	X	X	X	X	-	-	-	X	X	X
Harmonics	X	X	X	X	X	-	-	0	X	X	X
U transformer	-	-	-	X	X	-	-	-	-	-	X
I transformer	-	0	X	X	X	-	-	-	-	-	X
U burden	-	X	X	X	X	-	-	-	-	-	X
I burden	-	X	X	X	X	-	-	-	-	-	X
W register test	X	X	X	X	X	-	-	-	X	X	X
P register test	X	X	X	X	X	-	-	-	X	X	X
Selective measurement	0	0	X	X	X	-	-	-	0	0	X
Saving data	X	X	X	X	X	-	-	X	X	X	X

Dosage	-	X	Z	X	X	-	-	-	X	X	X
Dosage time	-	-	-	-	X	-	-	-	-	-	-
Source curve form	-	-	-	-	-	-	-	0	0	-	0
Source harmonics	-	-	-	-	-	-	-	0	0	-	0
Automatic test procedure	-	-	Z	0	0	-	-	-	X	X	X
Additional channels (DC)	-	-	Z	-	0	-	-	-	-	-	-
tm/te transmitter test	-	-	-	-	X	-	-	-	-	-	-
Long-time measurement	-	-	X	X	X	-	-	-	-	-	-
Read out data of a meter	-	-	Z	-	X	-	-	-	-	-	-

Legend: X = Standard, 0 = optional, Z = in development, - = not available

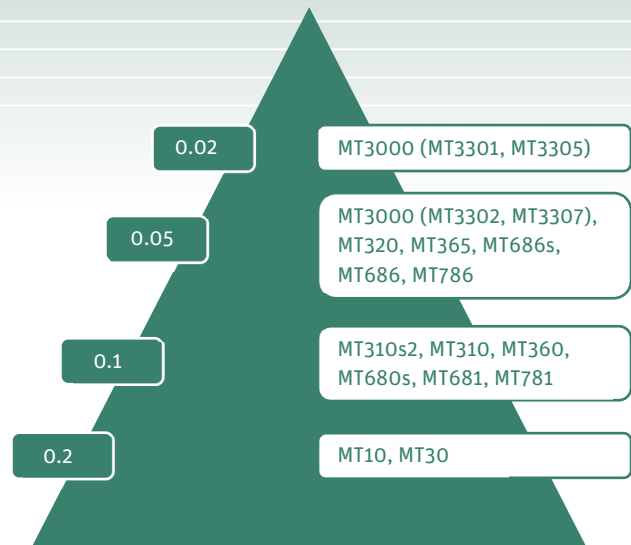

Subjects to alteration.

Accuracy classes of reference meters and test systems

Device	U _{max}	I _{max} **	Phases	Class
MT10	300 V	120 A	1	0.2
MT30	300 V	120 A	3	0.2
MT310	300 V	12 A	3	0.1
MT320	300 V	12 A	3	0.05
MT310s2	300 V	12 A	3	0.1
MT360	300 V	12 A	3	0.1
MT365	300 V	12 A	3	0.05
MT3301*	300 V	12 A	3	0.02
MT3305*	600 V	120 A	3	0.02
MT3302*	300 V	12 A	3	0.05
MT3307*	600 V	120 A	3	0.05
MT680s	500 V	120 A	1	0.1
MT686s	500 V	120 A	1	0.05
MT681	300 V	100 A	3	0.1
MT686	300 V	100 A	3	0.05
MT781	500 V	120 A	3	0.1
MT786	500 V	120 A	3	0.05

* MT3000 series

** Measurements with higher currents are possible via AC current clamps

Software features

MT310s2 / s2 series

MT10/MT30/MT3x0 MT36x/MT3000

Display of the currently measured values

The 'Actual Values' displays the currently measured values as a table. The table view of the actual values provides a rapid overview for error analysis. The actual values measurement helps to assess the condition of the mains supply and the meter installation, for instance no voltage, no current, incorrect current polarity, symmetry and asymmetry, etc.

MT310s2 / s2 series

MT10/MT30/MT3x0 MT36x/MT3000

Curve display

The 'Curve' display function displays the actual values of all the voltage and current channels as a waveform.

One graph displays simultaneously the voltage and current values from one channel.

The graphs are scaled automatically based on the actual value amplitudes.

Software features

MT310s2 / s2 series

MT10/MT30/MT3x0 MT36x/MT3000

Vector diagram

The 'Vector' diagram displays the actual values as vectors using various display options.

The vector diagram helps to locate circuit faults:

- Incorrect connections
 - Wrong terminal and incorrect rotating field
 - Polarity

MT310s2 / s2 series

MT10/MT30/MT3x0 MT36x/MT3000

Measurement of harmonics

The 'Harmonics' function displays the actual values of the harmonics of all the channels referred to the fundamental harmonic. This enables to detect whether there are harmonic distortions in the current or voltage.

Due to the high sampling rate of the MT device harmonic distortions in voltage and current can be measured up to the 40th (according to the voltage quality standard DIN EN 50160).

The measured harmonic range can be displayed in table or graph with a various of scales.

MT310s2 / s2 series

MT10/MT30/MT3x0 MT36x/MT3000

Determination of the measurement deviation

The 'Error Values' (also: error measurement) measures the measurement deviation of a meter. This function compares the energy measured by the reference meter with the energy metered by the device under test. The energy detected by the device under test is transferred to the reference meter by a pulse sensor or by the user counting the pulses. When the measurement has finished, the measurement deviation of the device under test is displayed as a %.

Especially with MT310s2: The error result will also be displayed in graphical view with the error limits.

MT310s2

MT3x0

MT3000

Burden measurement

The 'Burden' measurement (also: burden values) can verify the operational burden on the secondary side of an instrument transformer in a meter installation on-site.

This function allows to measure the operational burden of both, a voltage transformer and a current transformer.

Considering the nominal voltage/current of the operational burden of the instrument transformer as well as the cable length and the cross-section, $\cos\beta$ and operational burden in % will be displayed.

Measurement deviation of instrument transformers

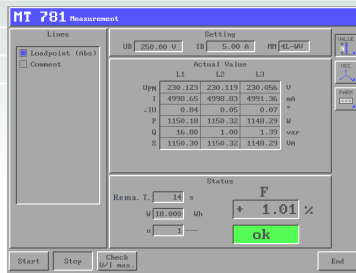

The function 'Current Transformer Values' (also: I-transformer measurement) determines the ratio of a current instrument transformer while in operation without having to disconnect the meter installation. In order to measure the high current on the primary side suitable current clamps are required. The result shows the ratio error and the phase shift of the transformer under test.

Detection of the pulse output

The function 'tm/te measurement' (also: tm/te transmitter) can detect additional pulse outputs or pulse inputs of meters (SO). The pulse outputs can either be compared with the energy measured by the reference meter or with the optical pulse output (LED) of the meter (meter under test).

The tm/te measurement can be detected and displayed the measuring period (tm in min) as well as the reset time (te in s) of a maximum demand meter.

Software features

MT36x/MT68x(s)/MT78x/MT3000

Automatic measurement

This function allows to edit and perform basic test sequences for testing electricity meters. All results are stored on the USB memory stick and further on can be evaluated with a suitable PC software.

MT551/MT68x/MT68xs/MT78x

MT400/500

Load point setting

The function 'Source' (also: source value) allows to define and apply the required load points. The user can set the current and voltage values and the phase angle or power factor for each phase.

MT551/MT68x/MT68xs/MT78x

Energy dosage

The 'Energy Dosage' (also: source dosage) is helpful for performing a register test of an electricity meter. Therefore, the corresponding MT device¹ defines the required energy which will be generated by the integrated current/voltage source² and sends it to the meter under test. The reference meter³ serves as reference standard.

- 1 MT551/MT68x/MT68xs/MT78x
- 2 depending on the device type
- 3 integrated at all devices of type MT68x/MT68xs/MT78x

Software

With the test and control software WinSAM 7 portable devices of the MT devices can be controlled manually. This software also serves for compilation of individual test sequences and data logs as well as the data management.

Accessories

All information for suitable accessories can be found in the product catalogue of each MT device on our website.
